

WHAT'S IN YOUR WATER?

TIAER will test your DRINKING WATER for bacteria (total coliforms & E.coli) with 3 easy steps!

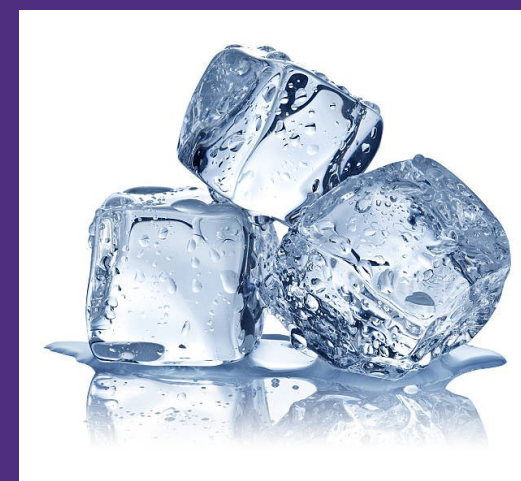

STEP 1:

Retrieve a supplied sample container and complete a Cooperative Agreement Form from the TIAER laboratory.

STEP 2:

Keep supplied sample bottle sealed until time of collection. Collect approximately 110-115 mL (shoulder of bottle just above 100mL line) and seal. It is important to avoid touching the inside of the lid or bottle to prevent contamination.

STEP 3:

ALL Samples MUST be returned to the TIAER laboratory, on ICE and within 6 HOURS of the collection time. You may pay by cash, card or check. A TIAER representative will contact you with your official results the next day.
